TECHNICAL DATA SHEET

POLYLINK™ 4230

PolyLink™ 4230 is a liquid curing agent designed to provide a good balance of chain extension and cross-linking with all standard TDI-based polyurethane pre-polymers. Pre-polymers cured with PolyLink™ 4230 generally exhibit longer pot lives, lower hardness and excellent physical properties than those cured with the commonly used curing agent methylene bis-oxychloro-aniline (MbOCA). Many high-quality elastomers can be formulated with both hot and room temperature-cured applications.

SPECIFICATION

Test Item(s)	Specification(s)
Appearance	Clear to Amber Liquid
Equivalent Weight	125-135
Specific Gravity	0.99 – 1.01
Water (%)	0.1 or Less

STORAGE

POLYLINK™ 4230 should be stored in tightly closed containers with proper labels in a cool and well-ventilated warehouse away from all ignition sources.

Eye contact, prolonged skin contact, and inhalation of vapor must be avoided.

SHELF LIFE

The shelf life is 24 months under recommended storage conditions. After 24 months, retest material.
